PRODUCT DATA SHEET

U-VALUE AS LOW AS 1.3 W/m²K

THERMA-LINE DOORS.

THERMALLY EFFICIENT STEEL DOORSETS

PRODUCT OVERVIEW

Therma-Line steel doorsets are designed to deliver reliable thermal efficiency with a U-value as low as 1.3 W/m²K. Engineered for commercial, industrial and residential environments, they combine durability with improved energy performance, making them suitable for both new-build and retrofit applications. They provide a secure solution where temperature control and long-term reliability are essential.

KEY APPLICATIONS

- Commercial Entrances
- Residential Developments
- Plant Rooms and Service Areas
- Public Buildings
- Industrial Units
- Refurbishment Projects

KEY BENEFITS

- **Enhanced Thermal Performance**
- **Designed to Meet Part L Requirements of the Building Regulations**
- **Improved Energy Savings**

SIZES (W × H)

Single · minimum	**500 × 700mm**
Single · maximum	**1410 × 2950mm**
Double · minimum	**900 × 700mm**
Double · maximum	**2820 × 2950mm**
Leaf thickness	**54mm**

ORDERING

Handings and sizes must be confirmed when ordering.

PRODUCT SPECIFICATION

✓ Available ✗ Not available

✓ Inward Opening	✓ Outward Opening	✓ Personnel Hardware	✓ Panic Hardware
✓ Access Control Hardware	✗ Louvres**	✓ Visions*	✗ Overpanels
✗ Side Panels			

Please note that hardware components can affect overall U-value results and impact the minimum manufacture sizes.

*Visions can be supplied using thermally rated glass; however, the U-value must still be considered an estimated performance at this time.

**Louvres are available but U-value performance will be affected – contact our team for more information.

Note: The performance of the Therma-Line product was determined by analysing samples of 1230mm wide by 2180mm high (singles) and 2000mm wide by 2180mm high (doubles). The resulting U-value can be attributed to doorsets at that size and with a ±25% size variation. Any size specifications outside of this scope can only be considered an estimated performance.
